

THE “KING KONG” OF PLATING LINES

We're proud to operate the biggest zinc electroplating line in North America. We can process parts up to 27 feet long and 8,000 pounds.

Finish big jobs fast. Our 4' wide x 7 ½' deep x 27' long tanks can turn around large parts in as little as 72 hours.

Save production time and costs. Our new line eliminates the need to design parts in multiple sections due to limited plating tank size. You can now process them as one large part and reduce your expenses.

Choose an alternative coating. Parts that previously had to be painted or galvanized due to their size can now be plated. We provide zinc finish with a high-performance trivalent chromate (RoHS compliant).
